Easy Grow Guide

PANSY FREEFALL® XL

Growing On to Finish: Packs, 10cm pots, 25-30cm baskets

Media:	Use a well-drained, disease free, peat-based growing mix with pH 5.5-5.8, EC <1.5mmhos.
Temperatures:	Keep media temperature at 17-18°C until roots have developed and then lower to 12-15°C to grow on. Pansies grow better in cooler temperatures, but crop time will increase if the temperature is below 12-15°C.
Light:	Keep light levels at 3000-4000 f.c.. Shade if light levels are higher to keep temperatures down.
Irrigation:	Practice a good wet/dry moisture cycle to aid root development and control habit.
Fertilizer:	Fertilize once a week with 150ppm N (nitrate form) from 15-5-15, 17-5-17, or 13-2-13 but keep media pH at 5.5-5.8 definitely <6.5 and media EC no higher than 1.0-1.5mmhos.
Growth Regulators:	Freefall XL is a hanging basket and container product and growth can be successfully controlled by temperature and good water management. If PGR's are necessary, sprays of B-Nine (2500–5000 ppm), B-Nine (1500–2500 ppm) + Cycocel (750–1500 ppm) will give some control. Weather conditions and cultural practices directly affect how much growth regulator to use so it is recommended that you run your own trials.
Pests:	Aphids, Thrips, Two-Spotted Spider Mite and Red Spider Mite.
Diseases:	Pythium, Thielaviopsis, Botrytis, fungal leafspots, Downy and Powdery mildew.

Please Note:

Crop times are for guidance only and based on optimum conditions.

Local cultural conditions may vary production times.

Please refer to the current label recommendations in regard to any chemical application.

PLUG AVAILABILITY	
480 / 360	Weeks: 30, 32, 34, 36, 39, 41, 2, 4, 6, 8, 10
